INOX E CORROSIONE

Quindi anche l'acciaio inox fa la 'ruggine'? Ebbene la risposta è sì

Contaminazione ferrosa. Cosa comporta?

La presenza di contaminazione sulla superficie del metallo crea:

- **Un difetto di tipo estetico**
- **Inneschi di corrosione localizzata** (detto pitting, vedi figura a lato), anche solo a contatto con l'aria. (sul lungo periodo) Che possono pregiudicare la giusta condizione di passività nel tempo.

Le **particelle di ferro che si depositano sulla superficie dell'acciaio inox si ossidano molto velocemente, formando così la ruggine**. Questo può avvenire anche solo in presenza di umidità atmosferica. Allora? Come bisogna lavorare l'acciaio?

Come lavorare l'acciaio al carbonio e l'acciaio inossidabile?

- effettuare la lavorazione dei due acciai in **due zone distinte e separate**.
- **utilizzare attrezzi manuali** (es. spazzole ecc..) **e macchinari** (es. presse ecc..) **non contenenti acciaio al carbonio**
- **pulire in maniera approfondita** sia gli attrezzi manuali che i macchinari prima di passare all'acciaio inossidabile
- le lavorazioni di taglio, saldatura o sabbiatura non devono essere fatte con elementi che contengono acciaio al carbonio (es. dischi abrasivi, elettrodi, graniglia ecc..)
- durante lo stoccaggio o movimentazione dell'acciaio inossidabile bisogna **evitare qualsiasi contatto con attrezzi di acciaio al carbonio** (es. forche di elevatori, catene, scaffalature ecc..)

Contaminazione ferrosa Cosa fare?

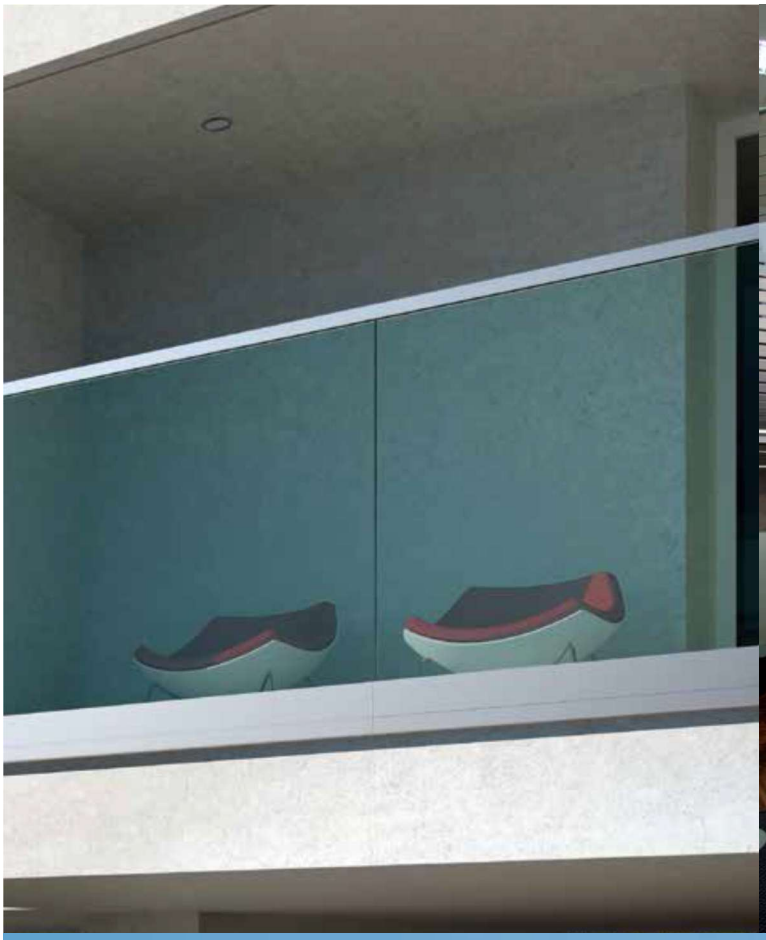

Mediante un **trattamento con specifiche prodotti passivanti** . Per rimuovere qualunque traccia di soluzione acida e contaminanti disciolti, sarà necessario risciacquare l'acciaio con acqua deionizzata. E, successivamente, asciugare la parte pulita. Per evitare l'effetto "a chiazze", è consigliato trattare l'intera superficie in inox.

Questi prodotti possono essere utilizzati anche:

- In caso di ossidazione dovuta principalmente ad un'elevata esposizione ad agenti corrosivi. (es. la salsedine)
- Nei casi di contaminazione da parte di metalli non ferrosi. (es. alluminio, rame, piombo ecc..)

RIVENDITORE UFFICIALE RETE X-TEND

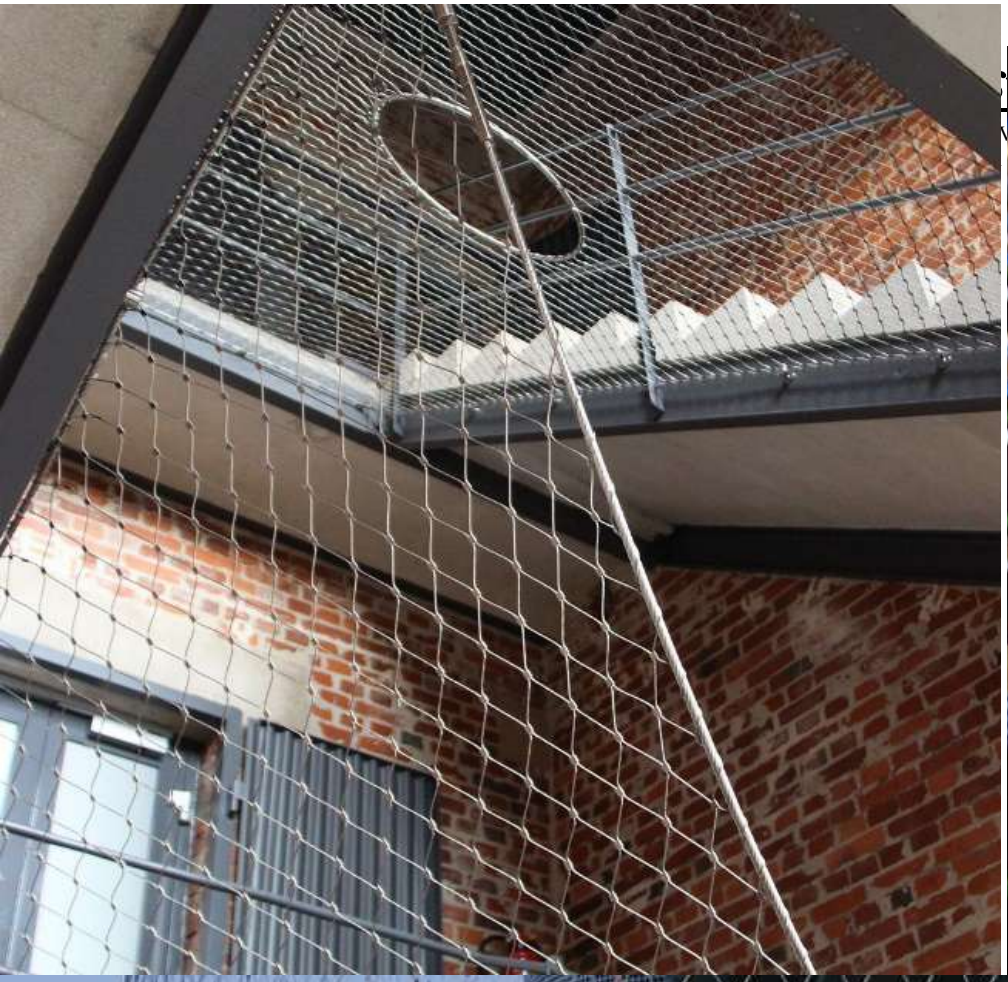

X-TEND è costituito da cavi in acciaio inossidabile di alta qualità e robusti, materiale 1.4401. Questi vengono pressati in un processo appositamente sviluppato con morsetti in acciaio inossidabile per formare una struttura di rete resiliente e flessibile per applicazioni bidimensionali e tridimensionali. X-TEND è dimensionalmente stabile e esente da manutenzione.

STORIA DEL FERRO BATTUTO

La lavorazione del ferro comincia intorno al 1400 a C, da qui in avanti l' uomo scopre la duttilità di questo metallo e inizia ad utilizzarlo per realizzare utensili che lo aiutano nella **vita di tutti i giorni.**

Lance per la caccia, arnesi rudimentali per lavorare la terra, lame e punteruoli per la difesa rappresentano le prime realizzazioni di questo periodo.

Il ferro entra a far parte sempre più nella vita delle persone attraversando il tempo tra le varie popolazioni e utilizzi; assiro-babilonesi, egizi, greci, romani, etruschi, ritrovamenti e manoscritti riportano testimonianze della lavorazione di questo materiale.

Con il correre del tempo, **il ferro trova sempre più impieghi**, dall' utilizzo nei campi e per la caccia all' ornamento e abbellimento delle abitazioni: letti, cancelli, recinzioni, ringhiere e balaustre, lampadari, tavoli e tavolini, sedie, gazebo, candelieri; tutto in ferro battuto.

Dipinto Goya Francisco – "La fucina "

FERRO BATTUTO, L' ARTE DEL CREARE

Il termine **ferro battuto** indica il **ferro sbalzato, martellato e intagliato.**

Queste lavorazioni sono eseguite dalle mani esperte del **fabbro**, che con l' utilizzo del fuoco, del martello e dell' incudine trasforma il ferro grezzo in opere d' arte.

Il ferro battuto acquista valore nel tempo per la sua caratteristica forma che richiama un mondo passato, la lavorazione infatti, pur cambiando alcuni procedimenti, è rimasta sempre uguale nel tempo.

RECINZIONE METALLICA ELETTROSALDATA

Safe Space

PANNELLO DI RECINZIONE SAFE OUT
per aree esterne in rete elettrosaldata maglia 60x200*

- realizzato filo pre-zincato di diametro 4,8 mm
- fili smussati alle estremità prima di essere saldati per evitare e sbavature che possano creare pericolosità al tatto e per rendere omogenea la verniciatura
- pieghe orizzontali di rinforzo per darne consistenza e rigidità
- verniciati in polveri epossidiche per esterno
- **adatti ad ogni esigenza perimetrale residenziale, industriale, spazi sportivi e pubblici, campi fotovoltaici, zone agricole**

Altezza	Larghezza	Nr. pieghe	Maglia
630	2045	2	60x200

Cancello SafeOut Carraio

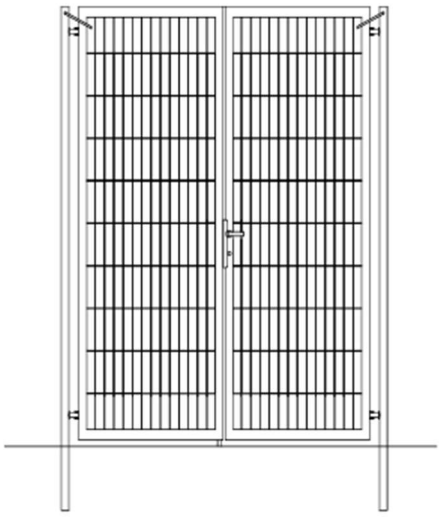

Vengono realizzati cancelli in struttura leggera marcati CE.

La struttura del telaio è in tubolare pre-zincato 50x50x2 mm.

La tamponatura è in rete elettrosaldata maglia 60x200 dim 4,8 mm.

Colonne a cementare 50x50x2mm o 100x100x3mm in base alle dimensioni del cancello.

Tutti i cancelli sono predisposti e corredati di serratura manuale e cardini regolabili.

Dimensione cancello Altezza x Larghezza	Pali (mm)	Telaio (mm)
1000x2000	50x50x2	50x50x2
1190x2000	50x50x2	50x50x2
1570x2000	50x50x2	50x50x2
1760x2000	50x50x2	50x50x2
2070x2000	50x50x2	50x50x2
1000x3000	100x100x3	50x50x2
1190x3000	100x100x3	50x50x2
1570x3000	100x100x3	50x50x2
1760x3000	100x100x3	50x50x2
2070x3000	100x100x3	50x50x2
1000x4000	100x100x3	50x50x2
1190x4000	100x100x3	50x50x2

Cancello SafeOut Pedonale

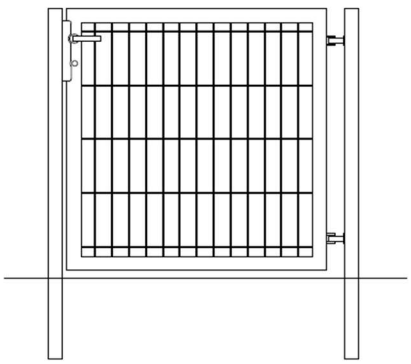

Vengono realizzati cancelli in struttura leggera pedonali marcati CE.

La struttura del telaio è in tubolare pre-zincato 50x50x2 mm.
